Report Reveals Biggest Decrease in Real Wages for Full-Time Faculty

Rebecca Kelliher

Jun 22, 2022

The American Association of University Professors (AAUP) released its [2021-22 Annual Report on the Economic Status of the Profession](#), which details findings from the AAUP's annual Faculty Compensation Survey. One of the report's biggest takeaways is that real wages for full-time faculty in 2021 fell below Great Recession levels of the late 2000s, after adjusting for inflation.

Funding Down, Tuition Up

State Cuts to Higher Education Threaten Quality and Affordability at Public Colleges

UPDATED AUGUST 15, 2016 | BY MICHAEL MITCHELL, MICHAEL LEACHMAN, AND KATHLEEN MASTERSON^[1]

Years of cuts in state funding for public colleges and universities have driven up tuition and harmed students' educational experiences by forcing faculty reductions, fewer course offerings, and campus closings. These choices have made college less affordable and less accessible for students who need degrees to succeed in today's economy.

REPORT JUN 11, 2020

Mounting Peril for Public Higher Education During the Coronavirus Pandemic

Absent federal action, state budget cuts are about to add to colleges' pain from the pandemic.

Most Americans don't realize state funding for higher ed fell by billions

Education Feb 26, 2019 12:20 PM EDT

Introduction — Preview & Road-Map

Three connected topics:

1. Document the substitution away from professors towards lecturers, at US public universities
2. Link the substitution to stagnating state funding, with a causal approach
3. Infer the mechanism for these changes, limited hiring, and implications for university decision-making.

Trends in US Higher Education

Shifts in State Funding

Effects on Faculty

Mechanism for Faculty Substitution

Trends in US Higher Education

I measure university characteristics + outcomes using National Centre for Education Statistics data (IPEDS).

- ▶ Panel data, universe of US higher education institutions 1990–2021
- ▶ Focus on public, 4-year universities
- ▶ Measure student enrolment, funding, and employment figures.

Trends in US Higher Education

- ▶ There were 5.8 million students enrolled at public universities in 1990, 2.7 million private
- ▶ There were 9.2 million students enrolled at public universities in 2021, 4.2 million private.

(a) Total Enrolment, Nation-wide.

Student Enrolment, millions

(b) Mean Enrolment, per University.

Student Enrolment, thousands

Trends in US Higher Education

Despite rising enrolment, thanks to higher education returns and increased access, **state funding has stagnated**.

Figure: Average Funding among Public Universities, by Year.

Mean Total Funding, \$ millions

Mean Funding per Student, \$ thousands

Non-institutional funding = sum of federal, state, and local funding plus tuition revenues.

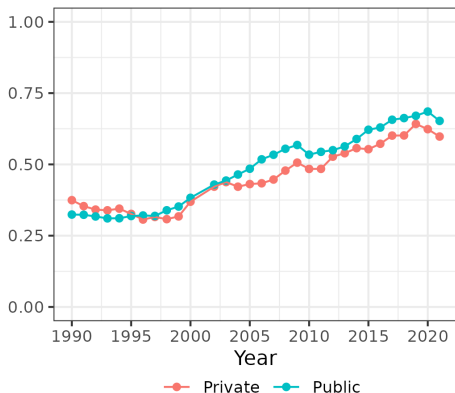

Trends in US Higher Education

At the same time, utilisation of lecturers has increased drastically, and tenure-track/tenured professors fallen at public universities.

Figure: Trends in Faculty Counts.

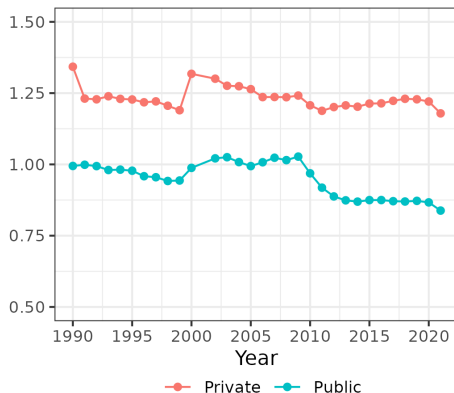

(a) Non-tenure Track (lecturers).

Lecturer count / 100 students

(b) Tenure-Track (Asst. Professors).

Asst. Professors / 100 students

Trends in US Higher Education

At the same time, utilisation of lecturers has increased drastically, and tenure-track/tenured professors fallen at public universities.

Figure: Trends in Faculty Counts.

(a) Tenured (Full Professors).

(b) All Faculty.

Trends in US Higher Education

So what are these trends about?

Trends in US Higher Education

So what are these trends about?

States decide an annual budget:

1. State legislature plans annual budget
2. Back-and-forth bargaining with governor, who signs off when they agree
3. Higher education is attractive to cut funding in this bargaining, thanks to low lobbying power.

Figure: Average Public University Funding.

⇒ institutional set-up leads to public universities stiffed year-on-year.

Trends in US Higher Education

So what are these trends about?

Figure: Average Illinois University Funding.

This process in Illinois, 2015:

1. Democrat state legislature plans annual budget
2. Sends to Republican governor, then **bargaining went nowhere**
3. 2016 fiscal year starts with no budget, state staff furloughed etc.

⇒ Partisan disagreements led to public universities stiffed 2016.

Shifts in State Funding

⇒ Stagnating state funding, and increasing reliance on lecturers.

Are state funding cuts **causing** the faculty changes?

- ▶ States with worsening economic conditions may find it harder to attract/keep faculty
- ▶ Political alignment may be correlated with state funding, and faculty outcomes
- ▶ Otherwise concurrent trends e.g., around the 2008 recession.

Christian Adams wants to be an immigration or labor lawyer, so he planned to major in Chinese studies at West Virginia University, with an emphasis on the Mandarin language.

But as his sophomore year begins, he has learned that, as part of a plan to close a \$45 million budget deficit through faculty layoffs and academic program consolidation, the university has proposed **13 / 26**

Shifts in State Funding

Estimate causal effects with using **Shift-Share IV for state funding** → **faculty** (Deming Walters 2017, Chakrabarti Gorton Lovenheim 2020).

1. Exploit different rates of historical reliance on state funding between universities, in 1990–1993
2. Interacted with state-wide changes in higher education funding.

$$Z_{i,t} = - \underbrace{\sum_{\tau=0}^3 \frac{1}{4} \left(\frac{\text{State Funding}_{i,1990+\tau}}{\text{Total Revenues}_{i,1990+\tau}} \right)}_{1. \text{ Base reliance on state funding, 1990–1993}} \underbrace{\left(\frac{\text{Total State Funding}_{s(i),t}}{\text{Student Population}_{s(i),t}} \right)}_{2. \text{ State-wide higher ed funding shifts}}$$

The Shift–Share IV approach assumes:

- ▶ State-wide shifts in funding for higher education affect all campuses, not targeted cuts (**exogenous**).
- ▶ State-wide funding shifts affect faculty only via impacting their employer's finances (**exclusion**).

Shifts in State Funding

Estimate causal effects with using **Shift-Share IV for state funding** → **faculty** (Deming Walters 2017, Chakrabarti Gorton Lovenheim 2020).

1. Exploit different rates of historical reliance on state funding between universities, in 1990–1993
2. Interacted with state-wide changes in higher education funding.

$$Z_{i,t} = - \underbrace{\sum_{\tau=0}^3 \frac{1}{4} \left(\frac{\text{State Funding}_{i,1990+\tau}}{\text{Total Revenues}_{i,1990+\tau}} \right)}_{\text{1. Base reliance on state funding, 1990–1993}} \underbrace{\left(\frac{\text{Total State Funding}_{s(i),t}}{\text{Student Population}_{s(i),t}} \right)}_{\text{2. State-wide higher ed funding shifts}}$$

The Shift–Share IV approach assumes:

- ▶ State-wide shifts in funding for higher education affect all campuses, not targetted cuts (**exogenous**).
- ▶ State-wide funding shifts affect faculty only via impacting their employer's finances (**exclusion**).

Shifts in State Funding

Estimate causal effects with using **Shift-Share IV for state funding** → **faculty** (Deming Walters 2017, Chakrabarti Gorton Lovenheim 2020).

1. Exploit different rates of historical reliance on state funding between universities, in 1990–1993
2. Interacted with state-wide changes in higher education funding.

$$Z_{i,t} = - \underbrace{\sum_{\tau=0}^3 \frac{1}{4} \left(\frac{\text{State Funding}_{i,1990+\tau}}{\text{Total Revenues}_{i,1990+\tau}} \right)}_{1. \text{ Base reliance on state funding, 1990–1993}} \underbrace{\left(\frac{\text{Total State Funding}_{s(i),t}}{\text{Student Population}_{s(i),t}} \right)}_{2. \text{ State-wide higher ed funding shifts}}$$

Strong instrument for public university state funding:

- ▶ $-\$1,000$ per student funding shift-share → $-\$1,176$ state funding
- ▶ -10% per student funding shift-share → -9.77% state funding.

Shifts in State Funding

Estimate causal effects with using **Shift-Share IV for state funding** → **faculty** (Deming Walters 2017, Chakrabarti Gorton Lovenheim 2020).

1. Exploit different rates of historical reliance on state funding between universities, in 1990–1993

Strong instrument for public university state funding:

- ▶ −\$1,000 per student funding shift-share → −\$1,176 state funding
- ▶ −10% per student funding shift-share → −9.77% state funding.

Shifts in State Funding — Effects on Faculty

Shift–Share IV Results for the average public university:

- \$1,000 state funding per student $\rightarrow \approx 6$ more lecturers / 100 students.
- \$1,000 state funding per student \rightarrow Ambiguous on professor count.

Shifts in State Funding — Effects on Faculty

Shift–Share IV Results for the average public university:

- 10% state funding per student $\rightarrow \approx 4.4\%$ more lecturers / students.
- 10% state funding per student $\rightarrow \approx 1.4\%$ fewer professors / students.

Shifts in State Funding — Effects on Faculty

Are effects transitory? Do universities only rely on lecturers during a short budget crisis, and hire more professors once the storm clears?

Substitution effects are long-lasting → local projections elasticities:

(a) Non-tenure Track (lecturers).

(b) Tenure-Track (Asst. Professors).

⇒ Substitution towards lecturers lingers for multiple years.

Mechanism for Faculty Substitution

Stagnating state funding led to substitution towards lecturers, at US public universities, but unclear how these effects come about.

- ▶ Are **faculty let-go** by their universities?
- ▶ Are **faculty leaving voluntarily**, following pay cuts?
- ▶ Are **faculty poached by other universities** e.g., after promotion limits at their current university?

Investigate these channels, with data on every faculty member at Illinois public universities 2010–2021.

→ Salary info is public knowledge (Public Act 96-0266), so I collected data for every faculty member at Illinois public universities 2010–2021.

Mechanism for Faculty Substitution

Mechanism for Faculty Substitution

→ Salary info is public knowledge (Public Act 96-0266), so I collected data for every faculty member at Illinois public universities 2010–2021.

≈ 16,500 total faculty in 2010

≈ 14,800 total faculty in 2021.

Mechanism for Faculty Substitution

To briefly summarise effects of state funding cuts on Illinois faculty:

- ▶ **No measurable effect of state funding cuts** on follow-on salaries, exit rates, or promotions among Illinois faculty, in shift-share analysis
- ▶ These data represent those who are already faculty
⇒ i.e., **incumbent faculty** unaffected by state funding cuts.

Mechanism for Faculty Substitution

To briefly summarise effects of state funding cuts on Illinois faculty:

- ▶ **No measurable effect of state funding cuts** on follow-on salaries, exit rates, or promotions among Illinois faculty, in shift-share analysis
- ▶ These data represent those who are already faculty
⇒ i.e., **incumbent faculty** unaffected by state funding cuts.

Mechanism for Faculty Substitution

Conclusion

More lecturers a bad thing? No, but many are over-worked, under-paid. . .

(a) Part-time Rate, Lecturers at Public Unis

Percent of Lecturers Working Part-time

Conclusion

Implies that public universities (who educate the majority of US higher ed students) make long-lasting personnel decisions based on yearly funding cuts. While instruction salaries are $< 30\%$ of total spending...

Percent of Total Spending going to Instruction Salaries

Conclusion

Implies that public universities (who educate the majority of US higher ed students) make long-lasting personnel decisions based on yearly funding cuts. While instruction salaries are $< 30\%$ of total spending. . . .

Percent of Total Spending going to Instruction Salaries

Conclusion

Main results:

1. State funding cuts lead to substituting professors for lecturers
2. No measurable effect on incumbent professors in Illinois
3. Evidence that effects happen via limiting hiring of new professors.

⇒ Implications for unis' human-resources and LR decision-making.

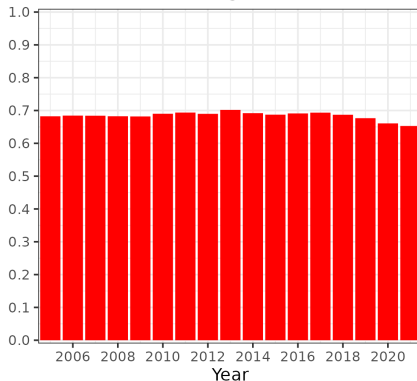

Thank you all for your time, Q&A comments welcomed or seh325@cornell.edu.
